Prof. Robert F. Curl

Houston, Texas - April 11, 2002

Robert Curl, chemist, physicist, and engineer, was awarded the 1996 Nobel Prize in Chemistry for his work on the discovery of fullerenes (C60 and C70) and other carbon clusters. His research has led to a better understanding of the structure and properties of these materials, which have potential applications in various fields, including materials science and nanotechnology.

Dr. Curl's work has been widely recognized with numerous awards and honors. He is a member of the National Academy of Sciences and has served as the president of the American Physical Society. His contributions to science have been instrumental in advancing our understanding of carbon chemistry and its potential for technological innovation.

Dr. Curl continues to be an active researcher and teacher, inspiring the next generation of scientists with his passion for discovery and innovation.
